1. Claims 1-20 are rejected as failing to define the invention in the manner required by 35 U.S.C. 112, second paragraph.

The claim(s) are narrative in form and replete with indefinite and functional or operational language. The structure which goes to make up the device must be clearly and positively specified. The structure must be organized and correlated in such a manner as to present a complete operative device. The claim(s) must be in one sentence form only. Note the format of the claims in the patent(s) cited.

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are indefinite since:

In claim 1, lines 3 and 5 a phase-frequency detector is said and then a phase detector is said and it is not clear what distinction Applicant is making; line 4, --frequency—should be inserted after “oscillator” because the oscillator is not that which is input; line 9, “the capacitors” should be changed to –tunable capacitors” since there is no antecedence for “the”

capacitors in the claim (they were not previously said); lines 11 and 12 the second occurrence of "a/A transconductance amplifier" should be changed to -said (or the) transconductance amplifier—since it has been previously said.

In claims 4 and 5, "the inductors" were not said in claim 1 and so it is not clear what inductors are "the inductors".

In claim 12, it is not clear what the "other" semiconductor process technologies are that Applicant is referring to; specific ones must be said e.g. -in one of ____ , ____ or ____ semiconductor process technologies.

In claim 17, there is no antecedent basis for resistor elements in the L-C filter, so claim 17 should depend on claim 14.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to David Mis whose telephone number is (571) 272-1765. The examiner can normally be reached on Monday through Thursday.
